

June 1995

Features

- Logic Level Gate Drive
- Internal Voltage Clamp
- ESD Gate Protection
- $T_J = 175^\circ\text{C}$
- Ignition Energy Capable

Description

This N-Channel IGBT is a MOS gated, logic level device which is intended to be used as an ignition coil driver in automotive ignition circuits. Unique features include an active voltage clamp between the collector and the gate which provides Self Clamped Inductive Switching (SCIS) capability in ignition circuits. Internal diodes provide ESD protection for the logic level gate. Both a series resistor and a shunt resistor are provided in the gate circuit.

PACKAGING AVAILABILITY

PART NUMBER	PACKAGE	BRAND
HGTP14N36G3VL	TO-220AB	14N36GVL
HGT1S14N36G3VL	TO-262AA	14N36GVL
HGT1S14N36G3VLS	TO-263AB	14N36GVL

NOTE: When ordering, use the entire part number. Add the suffix 9A to obtain the TO-263AB variant in the tape and reel, i.e., HGT1S14N36G3VLS9A.

The development type number for this device is TA49021.

N-CHANNEL ENHANCEMENT MODE

Absolute Maximum Ratings $T_C = +25^\circ\text{C}$, Unless Otherwise Specified

	HGTP14N36G3VL, HGT1S14N36G3VL, HGT1S14N36G3VLS	UNITS
Collector-Emitter Bkdn Voltage at 10mA	390	V
Emitter-Collector Bkdn Voltage at 10mA	24	V
Collector Current Continuous at $V_{GE} = 5V, T_C = +25^\circ\text{C}$	18	A
at $V_{GE} = 5V, T_C = +100^\circ\text{C}$	14	A
Gate-Emitter Voltage (Note)	± 10	V
Inductive Switching Current at $L = 2.3\text{mH}, T_C = +25^\circ\text{C}$	17	A
at $L = 2.3\text{mH}, T_C = +175^\circ\text{C}$	12	A
Collector to Emitter Avalanche Energy at $L = 2.3\text{mH}, T_C = +25^\circ\text{C}$	332	mJ
Power Dissipation Total at $T_C = +25^\circ\text{C}$	100	W
Power Dissipation Derating $T_C > +25^\circ\text{C}$	0.67	W/ $^\circ\text{C}$
Operating and Storage Junction Temperature Range	-40 to +175	$^\circ\text{C}$
Maximum Lead Temperature for Soldering	260	$^\circ\text{C}$
Electrostatic Voltage at 100pF, 1500 Ω	6	KV

NOTE: May be exceeded if I_{GEM} is limited to 10mA.

Handling Precautions for IGBT's

Insulated Gate Bipolar Transistors are susceptible to gate-insulation damage by the electrostatic discharge of energy through the devices. When handling these devices, care should be exercised to assure that the static charge built in the handler's body capacitance is not discharged through the device. With proper handling and application procedures, however, IGBT's are currently being extensively used in production by numerous equipment manufacturers in military, industrial and consumer applications, with virtually no damage problems due to electrostatic discharge. IGBT's can be handled safely if the following basic precautions are taken:

1. Prior to assembly into a circuit, all leads should be kept shorted together either by the use of metal shorting springs or by the insertion into conductive material such as †"ECCOSORB LD26" or equivalent.
2. When devices are removed by hand from their carriers, the hand being used should be grounded by any suitable means - for example, with a metallic wristband.
3. Tips of soldering irons should be grounded.
4. Devices should never be inserted into or removed from circuits with power on.
5. **Gate Voltage Rating** -The gate-voltage rating of V_{GEM} may be exceeded if I_{GEM} is limited to 10mA.
